

At Mixon Seed, we believe cover crops are an important tool in maximizing soil health and, in turn, enhancing grower profitability and environmental sustainability.

ReVive™ is our new line of cover crop mixes designed to make it easy to meet your specific crop management goals. ReVive™ Corn has been customized to meet the corn production needs in the South.

WHAT'S IN IT?

Horizon Oats (40%)

Trical 342 Triticale (20%)

Wrens Abruzzi Rye (20%)

Tillage Radish (5%)

Traiguen Crimson Clover (15%)

More species diversity in your mix leads to better soil health benefits like higher moisture retention, better weed reduction, enhanced nutrient recycling, and lower fertilizer inputs.

Key Benefits

 Early nitrogen availability

 Early biomass production

 Maximum biomass production

 Nematode protection

Planting

Ideal planting time for the ReVive™ Corn mix depends on your region. Generally, the earlier you can plant your cover crops after fall harvest, the better the results. The ideal planting rate is 40 lbs. per acre when drilled. If you're broadcasting, increase the **cereal rates** by 100% for a total volume of 80-100 lbs. per acre.
